Dr. Esther Lederberg
Department of Genetics
University of Wisconsin
Madison, Wisconsin

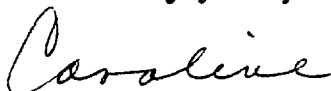

Dear Esther:

I am embarrassed not to have written you about how to make the pink yeasts darker before this. I didn't make a note of it, and I only thought of it when I was not at the lab.

The color increases with age of the colony, with aeration if grown in liquid culture, or it can be increased by the addition of methionine.

I'm also sending another pink culture which may be darker than the one you have. It is a mutant of 108.3 which is a th bi py Pa Ni In me g Ma.

Sincerely yours,

Caroline Raut
